## Injection pump BMP 433 VP

Air driven pneumatic piston pump for use with 1- or 2-component, pre-mixed resins or silicates. Simple to operate, easy to transport. Working pressure steplessly pre-adjustable.

BMP 433 VP is a pneumatic driven high pressure piston pump with a working pressure up to 264 bar. Transmission of fair motor is 33:1. Required injection pressure can be pre-adjusted precisely. When reaching the adjusted pressure the pump stops working. On the equipment are 2 different manometers to control the pressure. It is very easy to transport because weight is 14 kg including the material hopper with 6 ltr. BMP 433VP has a pressure release combination with which over pressure can be released also if the system is blocked. With this pressure release set flushing of the pump for cleaning after use is very easy and quick. Of course the BMP 433 can also be used as paint spray equipment by changing accessories.

**Optional accessories**

- HP hose dia-7,5 mtr
- HP spray gun
- HP injection gun
- Injection lance rigid
- Injection lance flexible
- HP ball tap stainless
- HP filter stainless steel
- Manual lift trolley
- Reversible tips for airless and fine spray
- Direct suction tube
